LENNOX
Innovation never felt so good.®

exact comfort

ComfortSense® 7000,
5000 and 3000 Series
Thermostats

Convenient and
efficient control.

ComfortSense® thermostats keep you comfortable and energy-smart.

Lennox takes great pride in creating heating and cooling equipment that can preserve your perfect temperature in any weather. But at the center of every good home comfort system, you need a good thermostat. The ComfortSense® 7000, 5000 and 3000 thermostats are designed to deliver sophisticated, energy-efficient control and comfort.

Simple to operate. And appreciate.

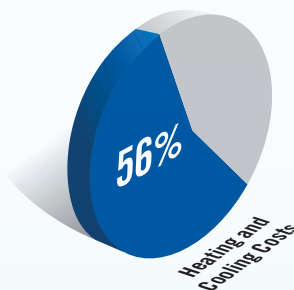

Sophisticated control doesn't have to be complex. Every ComfortSense thermostat is designed with simplicity in mind. User-friendly controls are easy to understand, and temperature adjustments are as simple as the touch of a single button or touchscreen.

Scheduling saves money without sacrificing comfort.

With a ComfortSense thermostat installed, you have the ability to synchronize your thermostat and your lifestyle. Use the simple setup process to tell the thermostat about your daily routine. The thermostat will then run the system based on this, reducing energy use and system operation when no one is home to appreciate it.

Precise control means perfect comfort.

The advanced electronics inside ComfortSense thermostats provide accurate temperature control so you can relax in comfort. Once your temperature is set, your ComfortSense thermostat adjusts the operation of your home heating and cooling system to maintain your ideal environment with great precision.

U.S. Household
Energy Consumption

**Source: U.S. Department of Energy (energy.gov) statistics.*

Proper use of a programmable thermostat can save you up to **\$180** every year in energy costs.
